

SURESHOT™

10 lb. Welding System

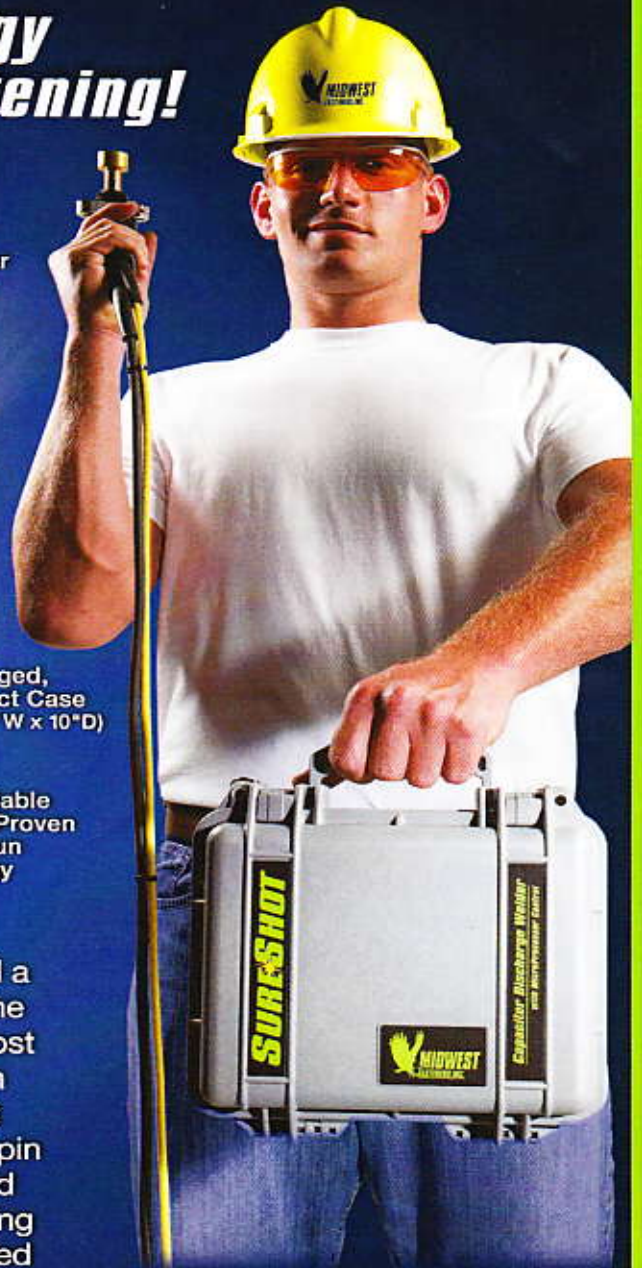

Manufactured
in the USA

**Hand-Held Technology
Comes to Insulation Fastening!**

We've taken careful aim, pulled the trigger and started a revolution with SureShot – the smallest, lightest, fastest, most rugged pin welding system ever. To be sure, SureShot will change your concept of pin

welding, be it cupheads, weld pins or even weld studs. The new technology it introduces, including advanced microprocessor circuitry with embedded software, cuts weight (the unit is a mere 10.5 lbs.); speeds application (rated at 24 welds per minute); endures extremes (performance tested from -4° F to +105° F); increases safety (it's ground fault protected); and withstands use and abuse (the high-impact case is virtually indestructible). Hand-held or slung over your shoulder, SureShot gets the job done faster, more reliably, using less labor. So set your sights on SureShot, and join the revolution.
